Dragonflies and Chris Goforth Meeting Notes

This meeting was held 2/22/19 at 5:00PM for 1 Hour in on Zoom (also in Library).

Attendance:

1. Ann Ciesla
2. Chris Goforth
3. Daniel Rutkowski
4. Justin Williams

Discussion Items:

- Color scheme?
- Overall thoughts on design?
- Any additional features for the admin page?
- How many species of dragonflies is data being collected on?
- Do the teams split up to collect data, one collecting dragonfly data and one collecting weather data?
- Do you want to keep records of group data that you choose to delete?
- Can we get a copy of what the worksheet looks like?
- Facilitator Role?

Notes:

- Color scheme?
    - Black(text), white(background), turquoise (accents), (00B3B3 html color code)
- Overall thoughts on design?
    - Pretty good
    - But 1 thing, include a session number or account number
    - Kids count multiple times per day, so have 1 column for session number
    - Group average and session average as downloads as well
- Any additional features for the admin page?
    - Group average and session average as downloads as well
    - Be able to download group average data and session average data separately
    - Ideally, have average group, session average, and all data download
    - Remove functionality for removing data
- How many species of dragonflies is data being collected on?
    - Only one species
- Do the teams split up to collect data, one collecting dragonfly data and one collecting weather data?
    - Yes, up to 6 groups each day for counts
    - 1 group each time that they count collects the weather data
    - The other groups do dragonfly count data
    - Enter kids that collect count data, and then just associate the weather team with the rest of them.
- Do you want to keep records of group data that you choose to delete?

Dragonflies and Chris Goforth Meeting Notes

    - Don’t worry about it, she can delete it after she downloads it
- Can we get a copy of what the worksheet looks like?
    - Yes
- Facilitator Role
    - They meet the group originally
    - Group number changes each day
    - They do other non-data collection activities
    - Maybe entering data if the kids don’t have time, but that would be the only interaction they would have
    - Would be lovely, all kids for a session will have the same weather data, any way to set it up so they wouldn’t have to fill out the data 15 times for each weather data
    - Kids that do weather data enter the weather stuff
    - Kids that do dragonfly count enter stuff in their own form
    - The key is to speed things up because they are always pressed for time
