

## Nominal Use Scenarios

### **Crab Shack Scientist** (As Primary Stakeholder):

The scientist logs into the application and is sent to the home page. He chooses to continue cataloguing new Crab specimens by clicking a button. He is presented with a picture of a specimen label and the fields that have been populated from the NfN project. The scientist chooses which of the options is correct for each field before saving the final record. He can then choose to continue cataloguing or exit the app.

### **Crab Shack Scientist** (As Secondary Stakeholder):

The scientist visits the Crab Shack App website to upload new data to be processed. After logging in he chooses the import option to add new data to the database. He uploads a number of images along with the corresponding data in the CSV file and clicks save to add the data. If the scientist wishes to see the final results from the application he can also choose export from the home page. This option will let the scientist download another CSV file that contains all of the final records.
