

User Environment

The user will access the application through a web browser and will be asked to log in or continue as guest. If a user continues as a guest he/she will be able to search for specimens and basically browse the completed records. If the user logs in then he will be prompted with the choice to continue validating the incomplete records or just browse through the records however differently from the guest users they will also have the permission to edit the record they are viewing. The interface is going to be as easy and efficient as possible, especially when editing the records, the application will try to complete and present as much refined data as possible in order to let the scientists simply choose the correct information and only ask them to write when something is missing, wrong and more data are needed.
