

Notes:

Tree types will be identified by the person, we don't need to give tips
Information boxes can be left blank

Usability, adding in pictures will make it easier
-however, this is not the plan for this current iteration/prototype

Measuring the ant mound, will that cause the user to put away, turn off, close their phone?

Measurements will not need to be perfect measurements, however, the more accurate the measurement, the better the data.

Measurements will use a tool.

Put the ruler in the picture? No

Tracking past data-

number of transects completed -under review at the end

-currently listed as mounds, should be changed

-do we want to have

Store user transect

Transects completed in a row for the webpage?

User info for total number of transects completed.

Tracker? Distance counter?

Can we do this to inform the students where they are

User info is still under construction

User Profile

Students still need tree type, forest type

Teacher accounts can only create student accounts?

3rd party account?

No back button/close option

include this?

include mounds/transects with user profile

so the teacher can edit possibly wrong data

teacher has final review
