

Meeting Minutes

HCI

Team 1

2/7/2017

Attendees

Tate Hanawalt

Marcus Stojceovich

Collin Baldwin

David Morehouse

Colin Brevitz

Sarah Scarlett

Don Lafreniere

Agenda

Discussed with Don and Sarah the cognitive walkthrough. We got Sarah up to speed and then went over the parts of the presentation. Don made a note that being 33 years old is not in fact old. We discussed the intro dialog page and agreed to remove it after hearing the feedback on it.

We also discussed in more detail the mapping data to use as well as how it will work as the main UI element. We agreed to have the user immediately select what decade they wish to view. The scientist made particular note they wanted to be different than Google Maps and so no satellite imagery.

We then discussed the other UI elements. The scientists wanted the information to primarily be popups tied to the point. These 'tooltip' points should clearly reference what point the info is tied to. We also discussed how the new point form would function, specifically to have instructions on each text input.

Finally we talked about the points themselves. The goal is lots of points, 'something to be proud of' and the need for a different color. We also agreed to make the active point stand out in some way. Two suggestions were to enlarge that point and change it's color in some way.

Responsibilities

- Add discussed changes to application
- Two weeks another meeting on the application progress
 - Link to updated site on Slack

Performance

- Everyone showed up on time.
