

**The Scientists: Secondary Stakeholder** - Don LaFreniere and Sarah Scarlett. The scientists provide the foundational information to the project, such as historical maps and census data. They also will collect and analyze the user-submitted information taken in by the project. The scientists are experts in both the historical data and GIS.

**The Users: Primary Stakeholder** - The users are going to be people who have historical photos and documents relating to the copper country. These users may or may not live in the area. The users will either be submitting from home or submitting at events thrown by the scientists. The scientists will also serve as users when inserting information they already have.

**The Developers: Tertiary Stakeholder** - The developers are all undergraduate computer science / software engineering students. They will interact with the product by discovering and fixing bugs.

**Dr Pastel: Tertiary Stakeholder** - Professor for CS4760. Grades the project.
