

# Design Updates

2/15/2017

- Add a map to allow people to select location if not using GPS  
Rationale: people may not know the address of where they were at, but they should be able to pick it out on a map
- Add filters for scientist view  
Rationale: Scientist wants to be able to download CSV of a segment of data, not always have to download all data
- Add CSV download option for individual students  
Rationale: We forgot this originally
- Add additional fields to sign-up (occupation, do you own a car, and household size)  
Rationale: This helps with data capture and might show some interesting trends in data
- Design out the desktop experience  
Rationale: Some students may want to input data on a computer later in the day if they don't have their smart phone on hand. Also it makes more sense to download CSV onto a computer instead of a smartphone
