

Professor

The professor will be our most important stakeholder, due to him basically being our customer. He is a specialist in traffic engineering and will be using the data from this app in long term records. He will be using this app as a major part of one of his classes.

Students

Students will be required to use this application multiple times throughout the class period. They will need to be able to quickly and accurately record data. Most/all of these will be civil engineer majors at the senior level, so their experience in the field shouldn't be an issue.

Team members

Our stake in this project is to be the development and design team of this app. Our reputation is on the line for future use and we are vested in the success of this project.

Michigan Tech

The data collected through the app will likely be of some use to the campus themselves. They could use it in future road/parking plans. This data could be used for future consultation by the university for the city of Houghton or Hancock.
