

## Design Change Document 2

### **Changes to Initial Public Homescreen:**

This section has been removed. The app no longer requires a sign in or a profile to be made.

### **Changes to Create Profile page:**

This section has been removed. The app no longer requires a sign in or a profile to be made.

### **Changes \*created\* Edit Profile page:**

This section has been removed. The app no longer requires a sign in or a profile to be made.

### **Changes \*created\* Sign-in page:**

This section has been removed. The app no longer requires a sign in or a profile to be made.

### **Changes to personal home screen:**

The personal home screen is now the general home screen. The change made to this screen will be that the top says "Welcome!" instead of "Hello, <name>". Also, instead of an edit profile page, there will be a button with "about" on it that refers the user to the about screen when selected. Change "record spawning" to "record observation" or something similar so it is less confusing.

### **Changes to New Survey page:**

Plan to add a "?" that automatically opens on first time recording that has explanations of each section to fill in in order to reduce confusion. The survey page will also require an email, as well as have an optional section for organization, vessel, and nationality. There will explanations for each part in the "?". At the bottom there will also be a checkbox that allows users to opt in to newsletters, given they provide an email.

### **Changes to Gallery page:**

There will no longer be information relating to each picture. This is due to new information received by the scientist which makes changes to the survey.

### **Overall changes to app:**

Move the "about" section out of "help" and make it its own section. Add something that stresses the need to provide an email in the about section.
