

### **Design changes after Final Design Presentation**

1. Give more visual indication that the filter's category and search results are separate
2. Separate the filter and search results into two distinct sections.
3. Change the year's filter from 1910-1920 to 1920's (ie just say the decade).
4. Add a clear filters button as well as have filters clear on a new search.
5. Add tool-tips's to help users understand how to use the search, filters, and results.
6. Instructional modal will now be page-like in structure (ie click arrow to go to next set of instructions.)
7. Remove old Help button on the top menu
8. Add city directory option to filters
9. Filter records based on table they are pulled from not information in the JSON returned from the query.
10. Have the number of records for a given sub-filter option appear next to each sub-filter.
11. Repopulate the search results when filters are removed.
12. Add the ability to close filter or results section without having to open another one.
