# Keweenaw Time Travelers

Group 0b100
Scientist Meeting Notes
February 10th 2020, 2:30 P.M.- 3:37 P.M.
Location: GLRC 316

– Scientists –
Don LaFreniere, Sarah Scarlett
– Attendance –
Christian LaCourt, Mason Sayles, Rebecca Barkdoll, Ruoxi Tian

---

– Discussion Items –

- We don't have to touch most of the index.html in the repo, only the search bar part and the result representation
- Filter searching
  - Default selection for location, year, etc would be ALL
  - AND or OR condition for keywords, currently thinking to use AND but would not apply when choosing from a multi list
  - On click event as applying filter or click apply, currently thinking on click changes but would be hard when filter expands too much
- Top search bar has a location and year. May need to restructure as we change the search style
- Scientists like the top N result feature
  - Search type
  - If one person searches for numeric and letters, then display top addresses. If one searches words only, then display names or stories first.
- Search PHPs are modifiable if we want to
  - Dr. Don will send the PHP scripts to us
  - One person at a time can login to the database (needs to be on campus wifi or with vpn)
- Tutorial/ Help

- - After we change all the interfaces, we need to remake the tutorial videos and update the YouTube channel
- Displaying too many search results
  - ex. Displaying 1000 Jane smiths
  - Display the number of how many results are returning so users can apply filters if needed
- There are inputs in the database with "null" word in the data entries
- Occupation search
  - Backend search
  - Abbreviations
