

Environment

What technology will the user have access to?

Users will access the application through a web browser on a personal computer. The user will have access to both a keyboard and mouse to interact with the application, and a monitor to display the application.

What environment will the user be in?

The user is most likely to be in a private office or on-site office environment, but due to the nature of the application can access the app from anywhere. Since flight path data is gathered from a virtual reality application, the user is likely to be in proximity to that application, perhaps even on the same machine. The application extends from academic research, suggesting users will be in proximity to Michigan Technological University for the application's infancy.
