

Team name: Programming Analogies

Date, time, and duration: February 16, 2023 2PM EST for 1 hour

Location: In-person, Rehki G009

Attendance

- Emilie Rummer
- Ethan Jones
- Grayson Wagner
- Josh Staples
- Kevin Kulich

Discussions and Decisions: Setup work environments for everyone. Allocate beginning tasks for everyone to start working on.

General Notes

- Begin to look at csv files so we know how to load data into tables
 - Align the columns to the appropriate fields.
- Dee is starting to work on the domain classes
 - Kevin will start working on loading data from the csv files Dr. Bettin provided.
- Edit not found page so it displays an image
- Emilee will work on creating a home page that will greet the user upon loading the web page
 - We will keep the skeleton homepage that was originally created and treat that as an admin page
 - We will work on admin pages later
 - She will start on the navbar and the layout so other developers can use the layout
- Decided that we will continue to use bootstrap to style our application.
- We will create a branch for a feature, then close the branch once merged
