

Design Changes after Final Design Presentation

- Removing the Sidebar.
 - remove whitespace.
- Move logo to top bar
 - Needed to move after the sidebar was removed.
- Change carousels to accordions.
 - The movement of the carousels was distracting, it drew attention away from the graphs.
 - If they became out of sync it looked bad.
- Added Help modal.
 - necessary change to give clarity to different aspects of the site.
- Removed checkbox for threshold slider, is now always on
 - Remove unnecessary interaction which hides another interaction
- Moved threshold slider information to below graph instead of on the totals card
 - Keep the modifier (slider) and its results contained in the same area on the page.
- Averages cards were finished.
 - Added math/logic to gas average card for gas consumption comparison to varying household sizes (by square foot)
- Totals card is now static.
 - Graph interaction does not change/update what is displayed on electric/gas totals cards
