

Final Review With Client

- Graph ranges that do the time swap for you as you change the time frame
- Having the navigation of the date ranges being more fluid would be nice
 - 1 day 1 month 1 year feels out of place
- Have the app integrate into the feedback of your house, notify user when they have used more than their set threshold
- comparison data
 - Comparing different days/months/year to each other
- user profile page
- save/set/forget settings
- moving the dropdown data into the profile page instead of the dashboard
- real time data/analysis
- Having billing stuff incorporated
- mobile integration
 - either an app or mobile browser
- ML or AI or ChatGPT for more personal recommendations
