Improved App

In an improved version of our app, there are several improvements that can be made. These improvements are detailed in the section below.

- Homepage: a big improvement would be to have an initial landing page that users can arrive at before needing to log in. They can first learn more about the app and its benefits before needing to log in.
- Mobile responsiveness: our app currently does not scale very well for mobile viewers. Ideally, each card should
- Per-user data display: currently we are working within the constraints of the data we have access to, which means only data for a single user. In the future we should display data specific to each user
- Authentication: authentication is tightly coupled with the point above. After authentication, only user-specific data should be displayed
