

Design Changes After Presentation

4/3/2023

Home Page

- General formatting and styling improvements, pictures need to be better spaced apart from each other. Use less bullet points and center spacing, Dr. Pastel doesn't like that kind of formatting.

Education Content

- Split half of the content and put it on a separate page. Making one of them more of a background information page would make the content easier to digest.
- Quiz Questions - Put most of them together near the end of the page. Having them scattered amongst the whole page doesn't make a ton of sense. The splitting of background content and greenspaces information will split the quiz questions up in that way.

Map

- need to finish the location icons on the map page. Dr. Pastel recommended using a geoJSON instead of the database to get the information up sooner.
- Information popup on the location needs to be functional
- Decision on whether to change to an earth view. After the points on the map are functional, we should change it to an earth view. If the points are still clear and visible we can stick with the earth view, otherwise go back to the traditional street view.
 - Stretch goal - make a layer view function that can change between the two map types

Stretch goals

- User upload functionality
