

Design Review Changes

Educational Content on first page, as user scrolls down

- Educational portion is the focus of the application
- No need for the user to click to another page, just scroll down to start
- Better user flow

Use Grails map instead of Mapbox/ArcGis

- Should be an easier option, we all have experience with it
- Can get some assistance from professor if needed
- Easiest option for us as developers

Manual Location upload

- Needed to be more inclusive for use cases
- Allow location to be added for pics that don't have location metadata
- Similar to upload photo functionality, additional button with popup

Navigation Bar at top of page

- Rather than the side of the page
- We believe it will look better
- Should work better for mobile devices, sidebar won't get in the way

Page Coloring

- Lighter Green
- More styling on the text
- Use something other than red against green
- Think about color blindness during color choice selection

Pre Uploaded Locations will not have pictures

- Scientist identified locations do not have pictures included
- Users will still be able to see their location on the map, including type if available
