

Urban Green Stormwater Infrastructure - Group 4

Date of Meeting: February 27th, Monday, 2/27/2023, at 5 pm

Location: In person Rekhi 114, and on Discord

Duration: 30 minutes

Attendees

- Michael Romero
- Colin Dohne
- Jordan Bramer
- Kyle McIntyre
- Sid Regmi

Action Items

Domain Commit

Spring Security Plugin addition

Put up base pages for home, education

Next Meeting with scientists

Spring break expectations

Discussions/Decisions

Development plans for this week

- Tues - Get the initial homepage/education page up and running. Also put some test data from the slides to show to the scientists. Also review and upload domain schema documents.
- Weds - ensure sufficient content is available to show scientists during the meeting. Ask specific feedback questions about content, including format, and how content should be split up. Meeting may start 15 minutes later due to potential conflicts.
- Thurs - Work through spring security plugin install. This should be done sooner rather than later to avoid problems. Also, get more pages up so more people can work at once on the project. Look to get to a state where our first deployment will work well and have

something significant to show. Ensure communications with UX consultants are up to date.

Spring Break Expectations

- No required work, can work on the project if you feel like it. If any work is done something should be said in the chat beforehand to avoid conflicted pushes.
- Review any work that was done over break and reset expectations for the next week of work. Keep in mind that we need to get the public site up by the end of the week.

Scientist meeting

- Have content ready to show them, more than just a simple rehash of what the power point has on it. We want to be able to ask high quality questions to avoid any confusion with them.
- Mention that we will be on spring break, will likely not need a meeting the following week due to the slower development state of break.

Next Steps

- Get the homepage/1st education page up
- Get spring security installed before we take any steps
- Get multiple pages up so we can multitask easier going forward
