

Design Changes

Date: April 4th, 2023

Meeting with Scientist

- Multiline is missing, but agreed that it is out of scope for the project.
- Scientist had no design changes other than to complete missing pieces of the project.

Design Changes:

The design changes that need to be implemented are included in finishing the implementation.

- Test cases need to be flushed out
 - Event listener for re-checking the test case when the test case is checked.
 - Clean up UI
 - Reorganize layout to hopefully avoid scrolling.
- Special characters need to be escaped in the text input block.
- Tutorial needs to be finished and incorporated properly.

Design Change Stretch Goals:

- Automatically fill in “expression” blocks in “or” blocks.
 - It can be tedious to fill in manually and would be a significant quality of life improvement for users.
 - May be difficult to implement.
