Team 5: Anti Panda

Date: February 05th, 2023
Time: 3:00 pm EDT
Location: Discord
Duration: 01 hours 10 mins

Attendees

- Mya Davis
- Ame Tian
- Isaac Elenbaas
- Maritza Gonzalez
- Noah Riske
- Quentin Ross
- Zane Smalley

Action Items

- Finish cognitive walkthrough presentation
- Polish the paper prototype

Discussions

- Discussion on organizational details of the page
- We worked out that the advanced menu will basically just be a text field automatically populated by the regex blocks that the user can then manually edit.
- Start making a list of blocks and functions that we will need to implement for basic functionality.
- We have to determine what happens if the user creates two disconnected blocks of regex.
    - Ideas
        - Generate two regex expressions.
        - Fail and display an error message.
        - Do nothing and assume the user will connect them.
    - Final decision was to put a red border around the workspace, telling the user something is wrong without getting in their face.

Next Steps

- Cognitive Walkthrough presentation on Tuesday
