Attendance:

Present:
Parker Kirwin
Josh Reynolds
Tyler Budd
Roger Lind
Michael Zitta

Absent:
Noah Reinke - presentation for another class
Thanuja Maddali - stated they would not be able to attend

Notes:
- Started with discussing our final project
- Parker/Tyler demoed the application
- Remarks from bill
    - Buttons are on bottom, why?
        - A: Usability reasons, if someone was using the app on an tablet or phone their hand would cover the the graph
    - Graph animation is weird, why? ← suggested adding a scrolling graph
        - A: graph is compressing data currently, not scrolling. We agree that it's slightly jarring to look at
    - What happens if you connect and disconnect micro:bit?
        - A: BUG, must refresh page to reconnect

Improvements:
- Having multiple micro:bits in one application
- Change graphing to a pannable-fixed width to scroll along instead of current graph
- Fix bug with disconnecting and reconnecting to a micro:bit
