

Team: BitBois

Scientist: Dr. Bill Siever

3/30/23: 4:30 pm @ Zoom

Attendance:

Present:

Noah Reinke

Josh Reynolds

Thanuja Maddali

Absent:

Parker Kirwin

Tyler Budd

Roger Lind

Michael Zitta

- Josh started off the meeting with a live demo and gave description of the app and it's features.
- Still need to do legend and axis properly
- Disconnect is working
- Bill's comments:
 - Concerned on the data logger posting multiple values to which he tested and it behaved very weirdly
 - Hard to do it properly since you don't know how many columns there will be since they are added dynamically.
 - Fixes:
 - Only support one column of data
 - Or have one graph per column
 - Limited on time which is understandable. He is happy with the progress
 - He stated that we should prioritize one path and stick to it.
 - Support multiple columns of one microbit
 - Support multiple microbits
 - Just polish up the currently supported single column single microbit
 - He has no strong feelings for which route to go, possibly the single microbit and they could just open up multiple pages to view multiple at once.
 - He would recommend the route that results in the cleanest and simple interface for the users
