

Sarah Saw Frog

Scenario 1

Users and Environment

Amateur Herpetologist: Sarah

Demographics:

Age: 25

Occupation: Student Location: Urban area Education: Biology major

Behaviors and Goals:

Enthusiastic about herpetology as a hobby. Loves exploring local parks and nature reserves to observe and document herptiles.

Wants to keep a personal log of sightings, including species, location, and behavior.

Interested in learning more about different herptile species and their habitats.

Outside Sarah's home. She has wifi access and is using her phone

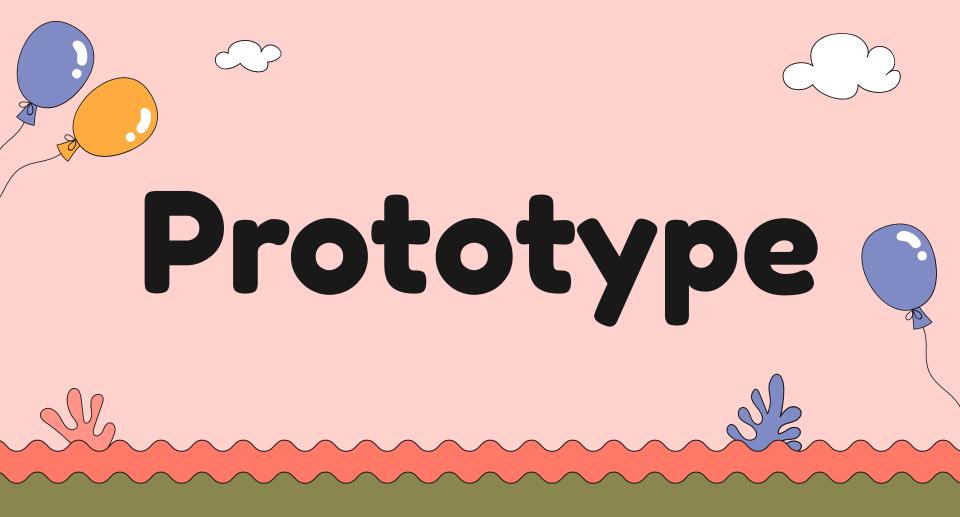

Use Scenario Description -Nominal

- Sarah sees a Northern Leopard Frog
- 2. Sarah opens the app
- 3. Sarah taps "record new finding"
- 4. Sarah inputs the animal, coordinates where they found the frog
- 5. Sarah then uploads an image of the frog
- 6. Sarah presses save and it commits the data

Usability

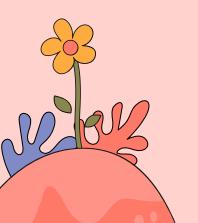

We want our application to be

- Easy to use
- Used offline
- Have a login function

Concerns

We are worried about

- Working with android
- Our ability to keep users logged in when offline
- Saving forms while offline
 - Uploading forms to the database
 - User authentication

Miles Saw a Turtle

Scenario 2

Users and Environment

Citizen Scientist: Miles

Demographics:

Age: 40

Occupation: Environmental Educator

Location: Suburban area

Education: Environmental Science degree

Behaviors and Goals:

Engages community members in herptile monitoring

projects.

Collects data for conservation initiatives and

educational programs.

Needs a comprehensive app to record and analyze data for scientific purposes.

Values collaboration and wants to involve others in the project.

Outside Mile's home. He has wifi access and is using his phone

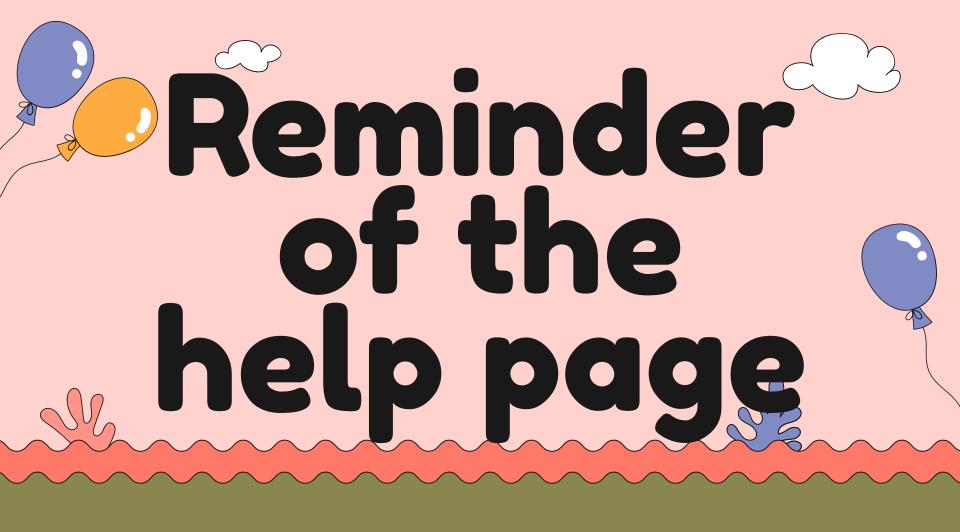

Use Scenario Description Error handling

- 1. Miles sees a Northern Leopard Frog
- 2. Miles opens the app
- 3. Miles taps "manage recordings" thinking it was how you add recordings
- 4. Miles taps "upload all" this uploads all unverified record into the database (very uncool sarah)
