 - c. Supplementary question askers: Wade Canavan, Jake Wilkins , Ben Walby, Gabe Smit, Katie Ulinski, Spencer Phillips, Jane Sinclair
 - d. Grad students: Blade Frisch, Sanskriti Bokde
5. Questions
 - What are the issue(s) that you would like this app to address?
 - Why would you want a device application over a persistent website? (this sounds right to you?)
 - Android and IOS adds lots of complexity due to being what's called cross-platform, which can double the work we need to accomplish. Which would you prefer over the other?
 - What languages would we use? (they don't know but we need to figure it out and have a why)
 - Changes based on what devices we choose
 - Kotlin, sqlite3, xml - android
 - ios - ??? **Team doesn't prefer IOS Development**
 - Windows - C# C++ (plz dont do) **###Windows is unfeasible for our scope.###**
 - Authentication :(
 - Why 15m accuracy for gps? Can this be widened (phone coords are only so accurate)
