Meeting with Dr. Pastel re: Project Design

- We need to tell Jessica about the team website!
(<https://www.csl.mtu.edu/classes/cs4760/www/projects/s24/group3/www/>)
- Grad Students - We haven't worked too much with them, but it's been alright when we have.
- Team Organization: Lela - Product Owner; Kevin - Technical Lead
 - Have a scheduled meeting time, but haven't needed to use it yet.
 - Will need meetings/work jams outside of class
- Remember: SHORT implementation time!

Design and Implementation

- Basically: Looks good, plan to make it responsive.
- We have a CSS Guru so we're in good shape
- Planning on using grails
- Not worrying about offline issues (Detroit has good signal)
- Test is getting removed
- How is the moderating process going to be done?
 - Teachers and Jessica are moderators
 - Posts can be removed by them
 - Jessica registers Teacher, Teacher registers Students
 - Public registration is outside of scope
 - Can use the security stuff from the assignments
 - Look for the hierarchy in SpringSecurity Document
- Help content
 - Will have some on the map page, on adding GSI
 - Use icon tool tips
 - Instruction box for the map
 - Sq. Footage linkage will require significant help
 - Make units clear, no multiple units
 - Consider default values in forms
- Implementation
 - Online only web app
 - Use grails
 - Hope to use Spring Security (UI)
 - Try and deploy early
 - Deployment lecture - outdated!!
 - Priority List:
 - Get app working with static information
 - Maps (Leaflet?)
 - Adding GSI
 - Spring Security/Account Management

- This stuff esp. should be tested
- Moderation (managing accounts)
- Post Review (managing posts)
