

All developers were in attendance alongside the scientist.

Order of Events

- We reviewed the finished product, going over every feature we were able to implement, some of which were done as of today, April 22.
- Map jumps to the current location of the user and can scroll elsewhere. Could be adjusted in the future to just the metro-Detroit area.
 - Further info can be clicked and brought to a second page containing that info.
- About and other smaller pages work as sources of information.
- Login works for registered accounts.
- Greenspace data can be added in Add Gsi, which is only accessible to account holders.
- Teacher accounts can log in and view members of the site.
- Scientist accounts can add teachers and use the admin panel.

Questions and Suggestions for Improvements

- Jessica liked it as a good starting point and said it looked easy to use for teens.
- As for things that stood out for things that could be improved visually, she didn't notice any glaring issues.
- More natural photos for examples of GSI would be ideal and resonate most with people.
- Adjust tables of view posts and similar pages to be in a mobile friendly format.
- When asked about the hardest part:
 - Database connections and interactions were difficult to gather, add information and everything into the database. Same with getting the accounts working as they were functioning using that database information.
