

- Meeting with Jane is most likely going to be early next week
- Make sure to let Jane know that we have a team website where she can view our documentation
- Make sure to make more of an effort to contact our graduate students' UX consultants
  - Ensure that they get a clear understanding of the project
  - Possibly add them to the Zulip
    - Make a channel that is used for communicating between the UX consultants and the developers
- We will be getting a priority list after the design review
- Design
  - “Basically good”
    - Don't need photos of the sheep (Focus on the essence of the app)
    - CSV download so possibly don't even need a database
      - Possibly use localforage (indexDB)
      - Determined that if we are going to have multiple devices for a single farm we are going to need a database
    - About page to sell the app to the users
    - How does a farmer set the farm name and farmer name
      - Concern about farmers having multiple farms/flocks
    - Make sure to google “Progressive Web App”
    - We are not going to be required to make an offline app
      - We are going to be working towards it but it is simply going to be on the “to-do” list
    - Possible tooltips to ensure that users are never lost
    - Default values for data entry
      - Set the default date as the current date
    - Allow for check date entry but have a value defaulted to the current date
  - Implementation
    - Don't worry about making it offline but have the project go toward it
  - Priority list
    - Sheep entry
    - Worming observations
    - Downloading the observation data
    - Managing the records (Only when managing data on the device)
    - Flock Analysis
    - \*\*All require security
