

Design Change Document: Post Final Design Presentation  
4/2/24

- Change how the calendar view shows many classes at the same time, to a scrolling view of the weekdays
  - Expanding an individual day instead of compressing class bubbles past a certain minimum size ensures that classes do not become too compressed and illegible
- Calendar view colors will not be a focus
  - If there is a solution to assigning colors to the calendar view that is visually appealing and does not take time away from core functionality development, then it may be revisited.
