Class notes:
Download data on researcher view - where does it go? Sending it to a computer or is it downloaded to the device.

      It goes to downloads folder

Export data for specific trails vs for all trails?

Issue if nobody has hiked on the trail - no data

Possibility of csv being too large to download to the phone - limit downloads to certain specifications (date restrictions)

There are apps to deal with CSV files - target device for analysis?

Kristen notes:
Need to add category of user e.g. Hiker, Biker, Horse, etc.
Exporting just one trail - not really a worry
Will mostly download data on a computer

      No need for analysis tools inside the app

Add labels to the numbers on the authentication home page
