

More time outside of class

Design

- How clearly is it displayed to the user that their email is a scam?
- Do you need a database?
 - Database needed to store training data
 - SQL Lite
 - Hosted by Cloudflare
- What are the important aspects that need to be explained to the user?
 - How to submit emails/text
 - How to interpret the confidence score
 - What to do next after getting the confidence score

Implementation

- Mobile
- Online Only
- Very little backend
- Uses 2 different AI models (LLaVA, Cloudflare Workers)

Priority list

- 1) Ai scam pipeline working
- 2) Portraying scam alert
- 3) Database
- 4) Education material
