

User 1: Careful Carl

Age: 21

Experience: low

Max is a new student to the lab and has only annotated videos a couple of times. He is very cautious in his annotating and will take multiple hours to do a single video. His process is very thorough, though, so he rarely misses any relevant information.

User 2: Reckless Randy

Age: 20

Experience: low

Randy is also a new student in the lab, and, like Max, he has only done a few annotations. But his process is much less cautious, and he focuses more on speed than accuracy. He watches the videos on 2x speed and doesn't pause to add a label. Sometimes he adds the wrong label and has to go back and change the label. He also sometimes closes the website before he saves, causing him to have to restart all over again.

User 3: Data Dave

Age: 24

Experience: high

Dave is lab staff and has been using the annotating app for a while. He is the person who gathers all of the annotations and uses it for data analysis. While he is good at gathering the data on time, some of his colleagues don't get their annotations done on time, leading to missing data on occasion.

User 4: Instructor Isaac

Age: 28

Experience: medium

Isaac runs the lab and has done some annotations himself, but mainly uses the app for viewing the progress of different projects in the lab and viewing other students' annotations for a specific video. Frequently, he wants to view a specific student's annotations to talk to the student about it.
