

1. Recipe separates from what ingredients the user has and the user needs. Would allow adding to grocery lists easier and would allow users to figure out recipe ingredient modifications.
  - a. Reasoning: Adds more functionality to recipe page and grocery list. Makes it easier for users to choose recipes and make grocery lists.
2. Recipe list should present save/generated recipes and then allow users to “add” recipes by generating more then.
  - a. Reasoning: Separates pre-generated recipes from generating new recipes. Less AI calls and makes it easier on users to figure out the difference between previous recipes and making new ones.
3. Add a button so users can say they don't have ingredients which would prompt them to change either their pantry or the generated recipe.
  - a. Reasoning: Connects recipe and grocery pages. Less work for users to update pages
4. Add help page
  - a. Reasoning: Provides guidance for users.
