

This is a history assignment. Pick a parallel machine that was built before the year 2000. Write a short summary and prepare to lead a 10 min discussion on your summary. Your page should probably be about 2 pages long and you can use at most one slide for the talk. Your summary should include:

1. history – when, where and who built it
2. taxonomy – where does it fit into the Flynn Taxonomy
3. users – who used the machine and for what
4. impact – how does it fit into the history of (parallel) computing
